Hey all, we're super excited to bring you this news today: the Initial Membership Offering (#IMO) for the long-awaited Diamond Reserve Club with tokenized membership begins on September 7. IMO is a brand new instrument of facilitating tokenized membership in a digital community or a club. Although, it appears to be similar to ICO or IPO, the similarities are scarce, if not nonexistent. The Club's membership is tokenized through Diamond Reserve Coin, which is hedged by real physical diamonds, therefore not susceptible to government control and can easily withstand any political or economical turmoil. An opportunity we've all been waiting for a long time - to be able to exchange digital tokens for physical diamonds, right?

The Diamond Reserve Club is the answer to the question of exclusivity in the ever-widening tokenized membership pool. It only took a few years for the world to go mad for crypto and it's time to refine the offer in such a way that will separate toy-tokens from digital entities that provide the DRC members with the real right of access to the most modern, most timely, most useful benefits.

Please, see [www.drc.world](http://www.drc.world) for details, hope to see you all there!
